How to create forms in Sitefinity

Introduction

Forms are the web pages that collect data from the users or the visitors of your website. Forms can be created and configured on the forms page. Before creating the MVC form you have to install the feature module.

To create work forms, follow these steps:

Step 1: Dashboard > Content > Forms > **Create form**

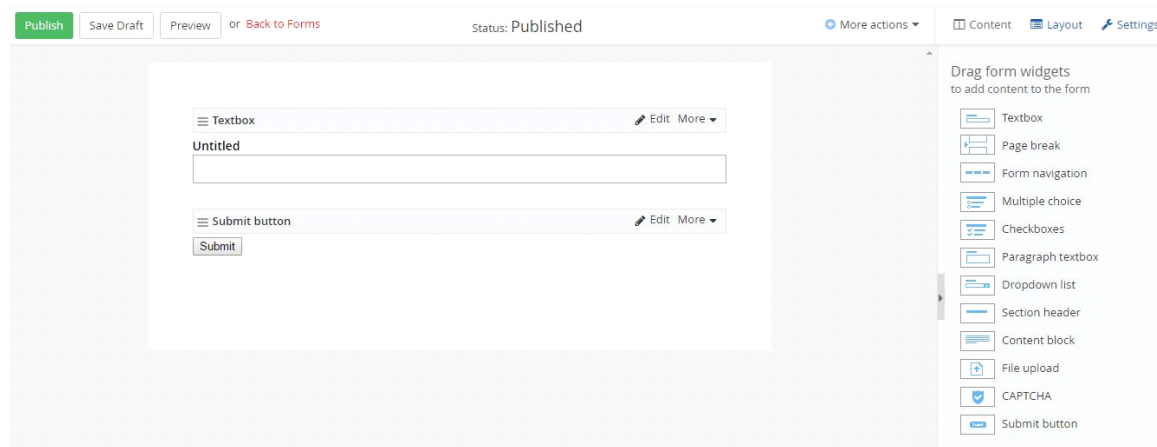

Step 2: Give a title

Click on **create and go to add content**

Step 3: Now drag and drop fields from left side

For Example:

drag and drop text box field

> Click on edit of text box field

> Give label name and if you want place holder also and give validation message and Check required field (if required)

> You can give predefined value

> If you click on more options you can choose template and css for that form

> Click on **save** button

TEXTBOX

Label and text

Limitations

Label

Last Name

Example: First name

Placeholder

Enter your last name

Add instructional text

Predefined value

☒ Required field

Error message displayed if the textbox is empty

This field is required

More options

Save

Cancel

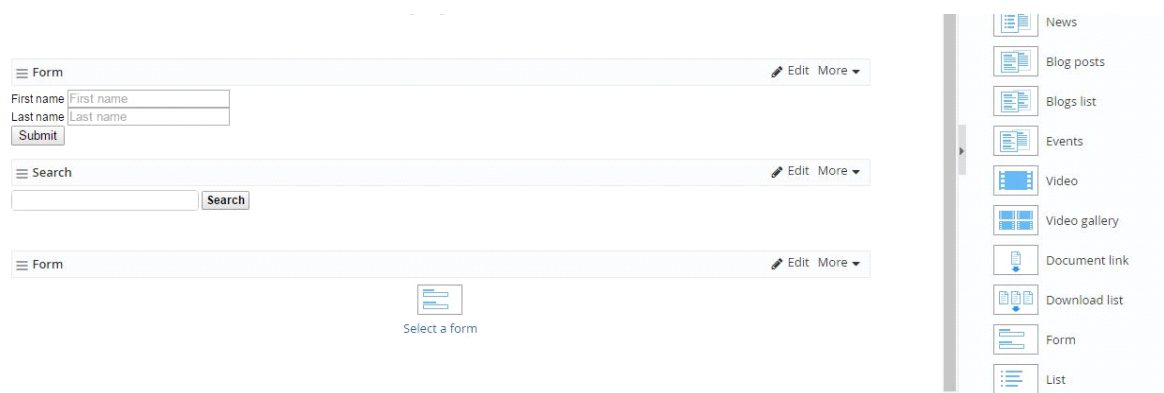

Advanced

Publish that form

Open page in edit mode in which page you want to put that form.

Drag and drop that form widget like below

How to create forms in Sitefinity

Then that will show forms and ask choose form then select your form and click on **save** then **publish** the page.
