How to implement Dynamic data retrieving in Sitefinity

How to implement Dynamic data retrieving in Sitefinity

One of the many advantages of Sitefinity is that it includes access to the full suite of Telerik RadControls, including the one we'll be using: RadRotator. Using this and other controls from the suite allows you to quickly add useful and powerful widgets to your Sitefinity website.

Steps:

Step 1: Open your project in Visual Studio

Step 2: add one custom user controller

in that add RadRotator

Step 3: In codebehind :

Retrieve the data and bind the data as in asp .net and using DynamicModuleManager by calling the GetDataItem's method

After doing all

Step 4: Build your solution

Step 5: Register the controller in the toolbox(dashboard).

Step 6: Drag and drop your controller to your page and **publish**

About Ray Business Technologies

Ray Business Technologies is a leading Global Information Technology (IT) Services and Solutions, a CMMI Level 3, ISO 27001:2013 and ISO 9001:2015 Certified Company.
